

WILLIAM (LIAM) HOPKINS

520 Summit Ave E ♦ Apt 404

Seattle, WA 98102

we.hopkins@gmail.com

OBJECTIVE

To change the world through good engineering culture in the Staff Systems Engineering role.

EXPERIENCE

Meta Platforms

July 2024 - May 2025

Production Engineer - Warm Storage

Seattle, WA

- Joined the storage platform team to support major infrastructure changes to solve multiple longstanding reliability and telemetry issues across existing functional areas.
- Developed a novel software bridge to enable company-wide infrastructure planning processes to interface automatically with existing fleet and capacity management systems.
- Participated in planning and design for future of warm storage infrastructure, encompassing radical changes in predictive capacity forecasting due to growth of storage needs related to AI.
- Progressed a department-wide initiative to add insight and telemetry to distributed storage replication systems that were developed organically over time without telemetry support.

Google

August 2018 - April 2023

Senior Systems Development Engineer - Google Cloud Platform - Guest OS team

Seattle, WA

- Technical lead for all public-facing components and deliverables including pre-provisioned operating system image and Google Compute Engine software releases.
- Rewrote the Guest Environment software suite from Python to Go, and implemented or oversaw all major software features released between 2019 and 2023.
- Developed and maintained Google Cloud integrations for customer needs such as user and SSH key management, user identity systems and software patching.
- Built and maintained custom RedHat integrations with Google Cloud enabling customers to register, manage and patch their systems using RedHat's existing infrastructure.
- Developed build, test and release systems appropriate for the Images team's bespoke needs. Led projects on bridging gaps in software management on Google Cloud.

Amazon Web Services

August 2013 - August 2018

Senior Systems Development Engineer - Elastic Block Storage - Platform team

Seattle, WA

- Engineering lead for the platform team responsible for the entire EBS physical hardware fleet.
- Led a cross-team effort moving from ad-hoc software releases to fully managed, continuous deployment model. Result: 90% of internal teams were able to full CD processes.
- Represented EBS in an AWS wide effort to enable automated zone deployment. Result: reduction of 10 engineer-years per year.
- Led a project to implement a new hardware provisioning and lifecycle management system. Result: reduction in datacenter hands-on hours of 75%
- Spent 15 months in a cross-org effort to create failure analysis and prediction systems for a fleet of 1+ million physical hosts.

TECHNICAL STRENGTHS

Computer Languages

Python, C/C++, Go

Protocols & APIs

JSONRPC, gRPC, IPv4, IPv6, SSL/TLS, SSH

Infrastructure

EKS, GKE, Kubernetes, AWS EC2, Google Compute Engine, VMWare

CI/CD

AWS CodeBuild, Google Cloud Build, Jenkins, K8s Prow

Tools

Github, Perforce, Vim
